# Seagrass meadows

- Ecosystem services
  - ❖ Sequester carbon
  - ❖ Protect shoreline
  - ❖ Regulate nutrients & turbidity
  - ❖ Provide food & habitat

© LOUISY Patrick

- Anthropogenic pressures
  - ❖ Sea level rise
  - ❖ Nearshore development
  - ❖ Environment contamination

Unsworth et al. (2019)

- Indicator of coastal ocean health
  - ❖ Water Framework Directive

# Monitoring seagrass status

- Global challenges
  - ❖ 72 seagrass species in 208 countries
  - ❖ **Large gaps in seagrass records**

Unsworth et al. (2019)

Region	Countries	Continental shelf (km <sup>2</sup> )	Coastline (km)	Number of seagrass species	Documented seagrass area (km <sup>2</sup> )	Countries lacking polygon data	Countries seagrass records absent
1. Temperate North Atlantic	25	20 015 178	207 997	5	3 430	11	7
2. Tropical Atlantic	64	2 949 362	77 804	10	109 146	17	14
3. Mediterranean	30	1 900 896	48 382	9	25 260	14	6
4. Temperate North Pacific	6	10 557 527	112 130	15	1 675	1	
5. Tropical Indo-Pacific	74	8 741 755	239 163	24	168 488	20	12
6. Temperate Southern Oceans	9	4 291 071	51 134	18	17 179	4	3
GLOBAL	208	48 455 788		72	325 178	67	42

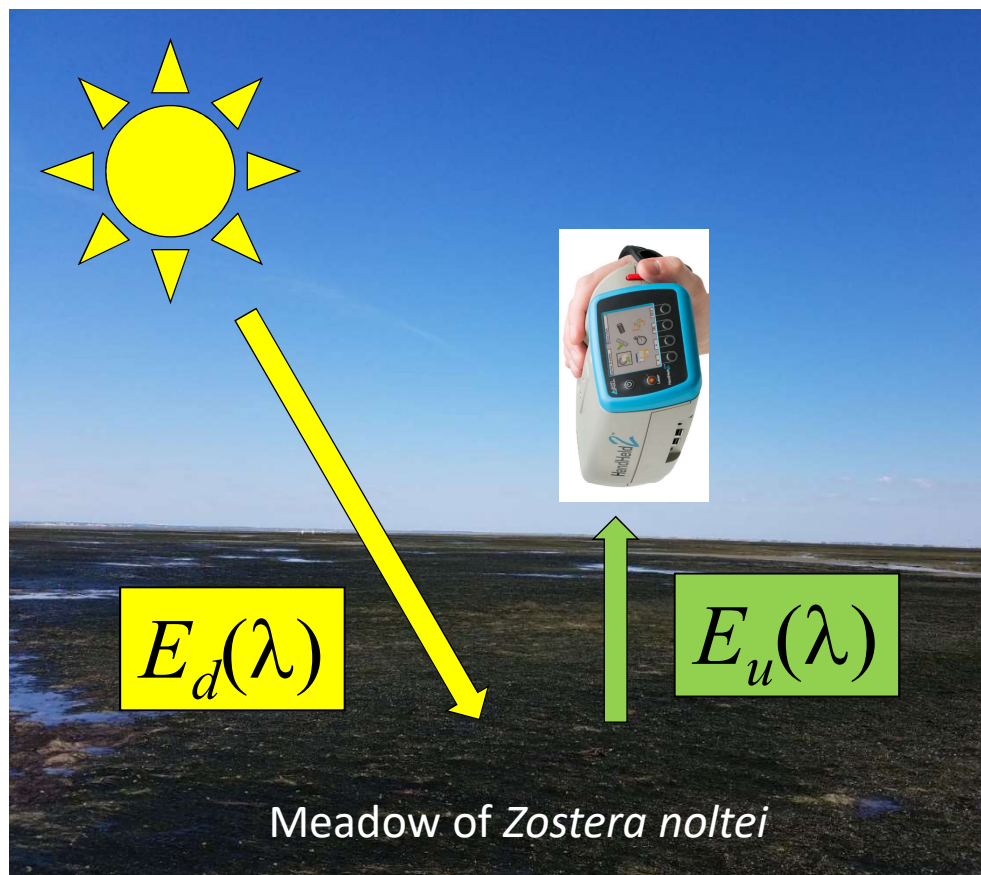

- ❖ Harmonize and rationalize seagrass data & indicators  
(*Marba et al.* 2013 identified 51 different metrics in EU)

# Earth Observation

- Long-term time series of satellite images ( > 30 years)
  - ❖ SPOT & Landsat archives (1980s – present)
  - ❖ High spatial resolution (10 – 30 m)
  
- Sentinel-2
  - ❖ Global coverage
  - ❖ Spatial resolution 10 m
  - ❖ Revisit time 5 days
  - ❖ 2015 – present (expected end > 2030)

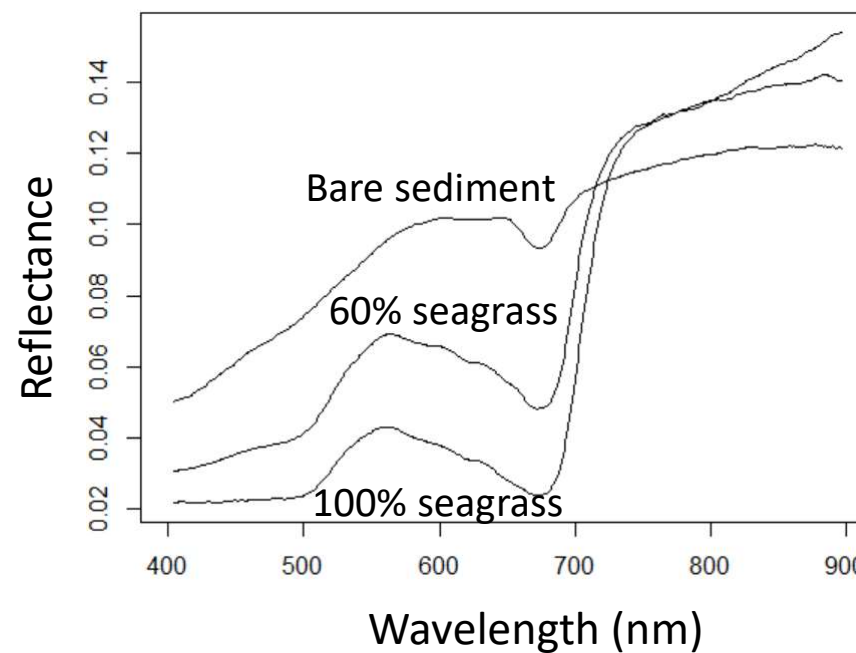

# Field radiometry

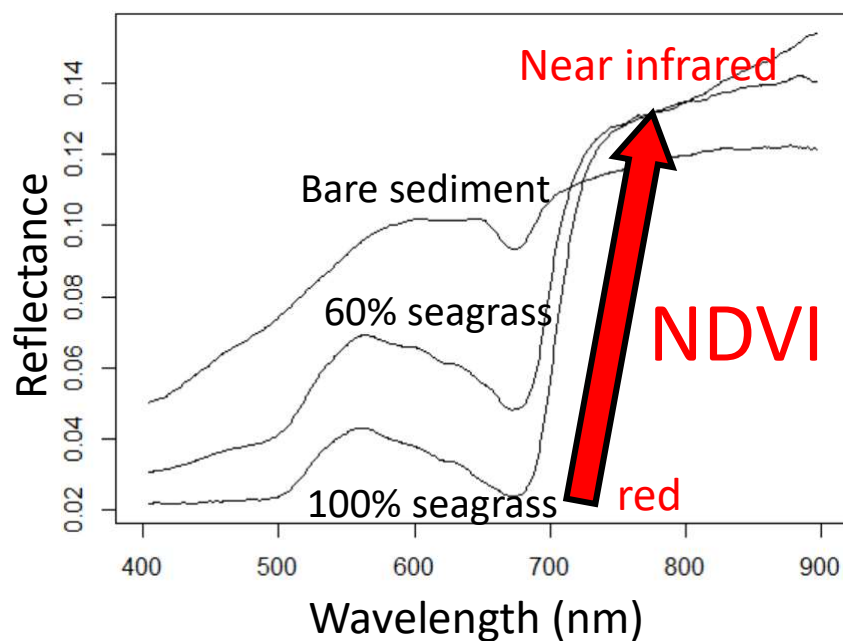

$E_u(\lambda)$  is the upwelling irradiance ( $\text{W m}^{-2} \text{nm}^{-1}$ )

$E_d(\lambda)$  is the downwelling irradiance ( $\text{W m}^{-2} \text{nm}^{-1}$ )

$$R(\lambda) = \frac{E_u(\lambda)}{E_d(\lambda)}$$

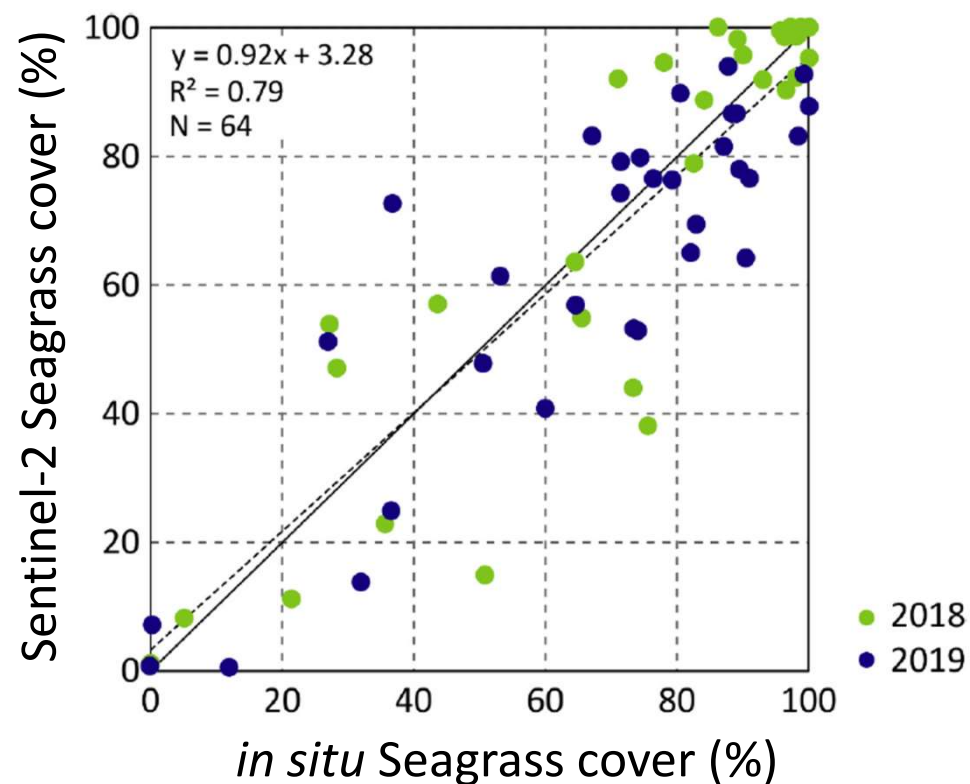

# Seagrass detection

# Algorithm calibration & validation

- *in situ* calibration in several sites in Europe
  - ❖ Bourgneuf, Marennes-Oléron, and Cadiz (Spain)
  - ❖ Emerged *Z. noltei* meadows

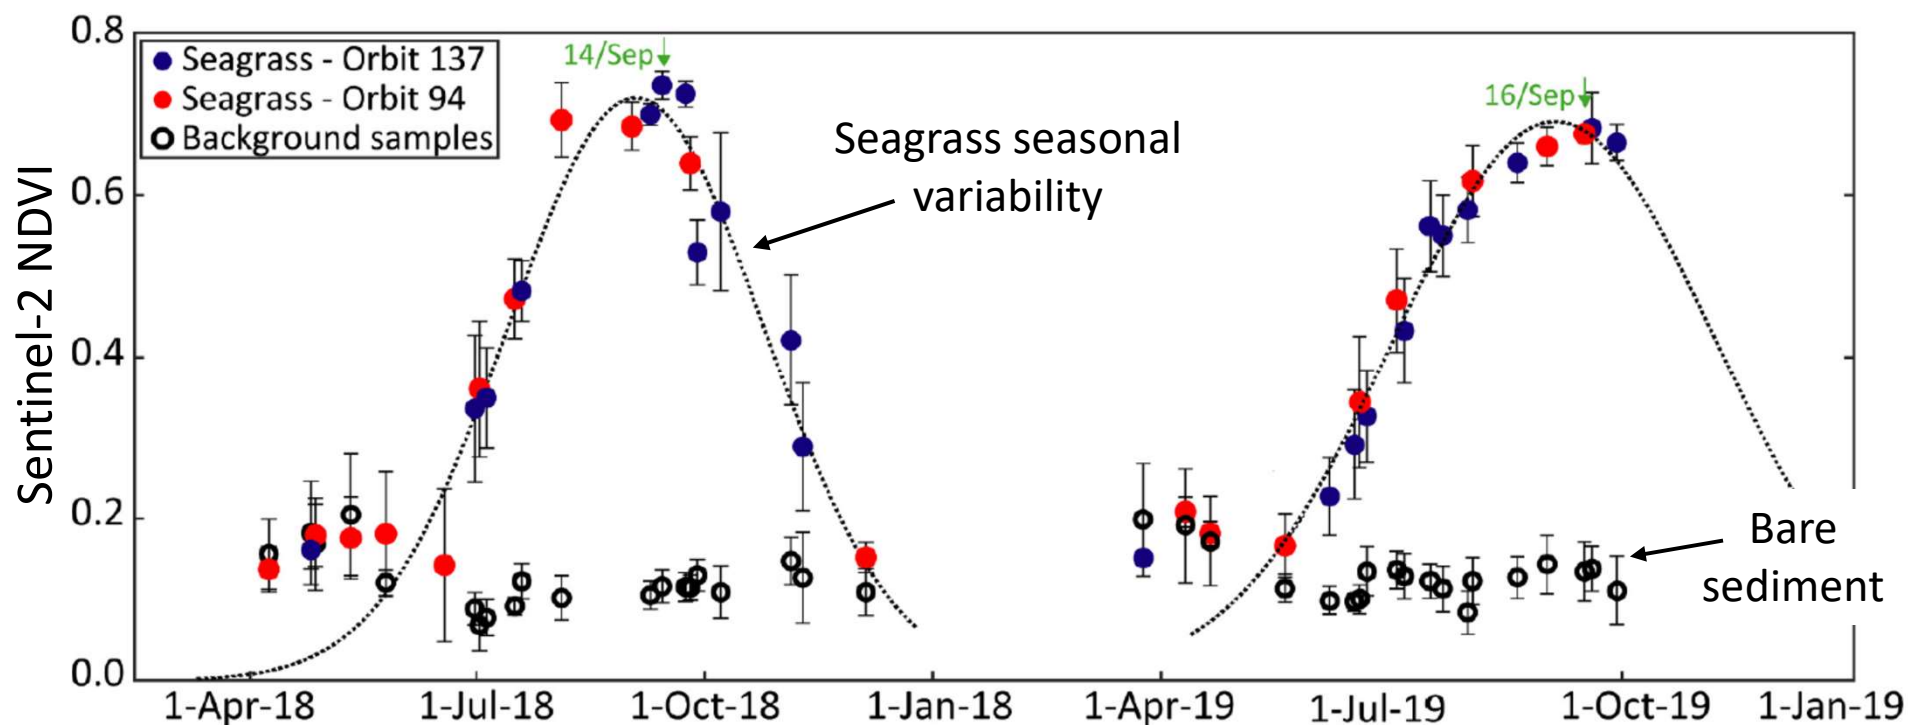

- Map validation
  - ❖ 320 individual quadrats
  - ❖ 1 point = averaged 5 meas.
  - ❖ RMSE 14%

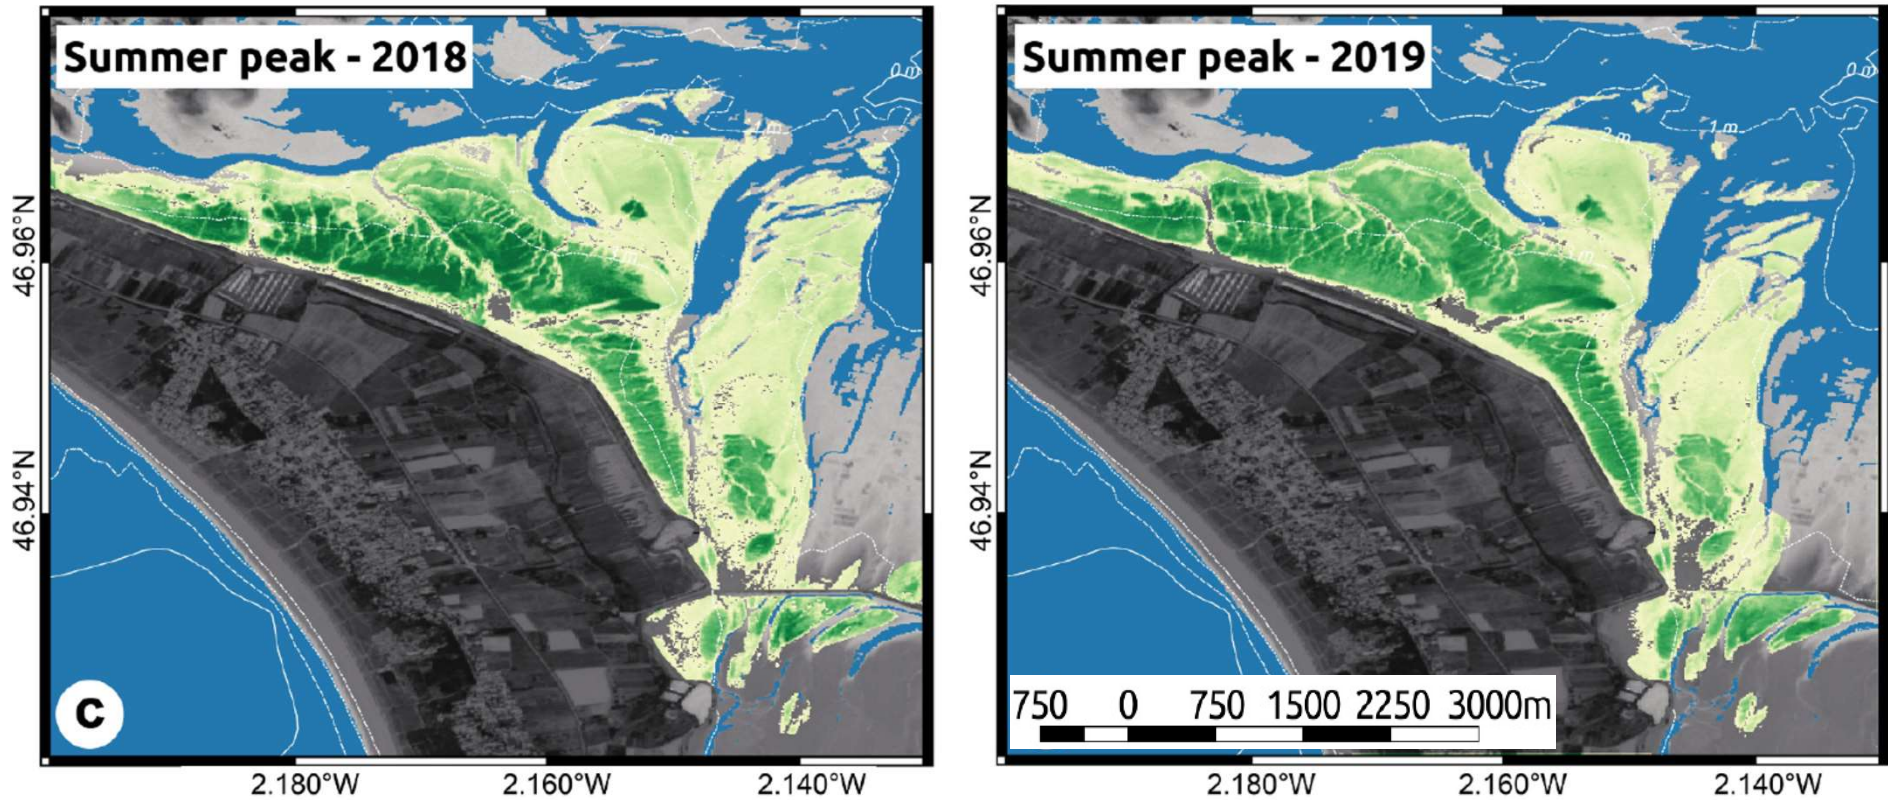

# Seagrass seasonal cycle by satellite

- 42 clear sky & low tide images in 2018 – 2019
  - ❖ Gaussian fit to characterize seasonal variability
  - ❖ Seasonal cycle: late summer

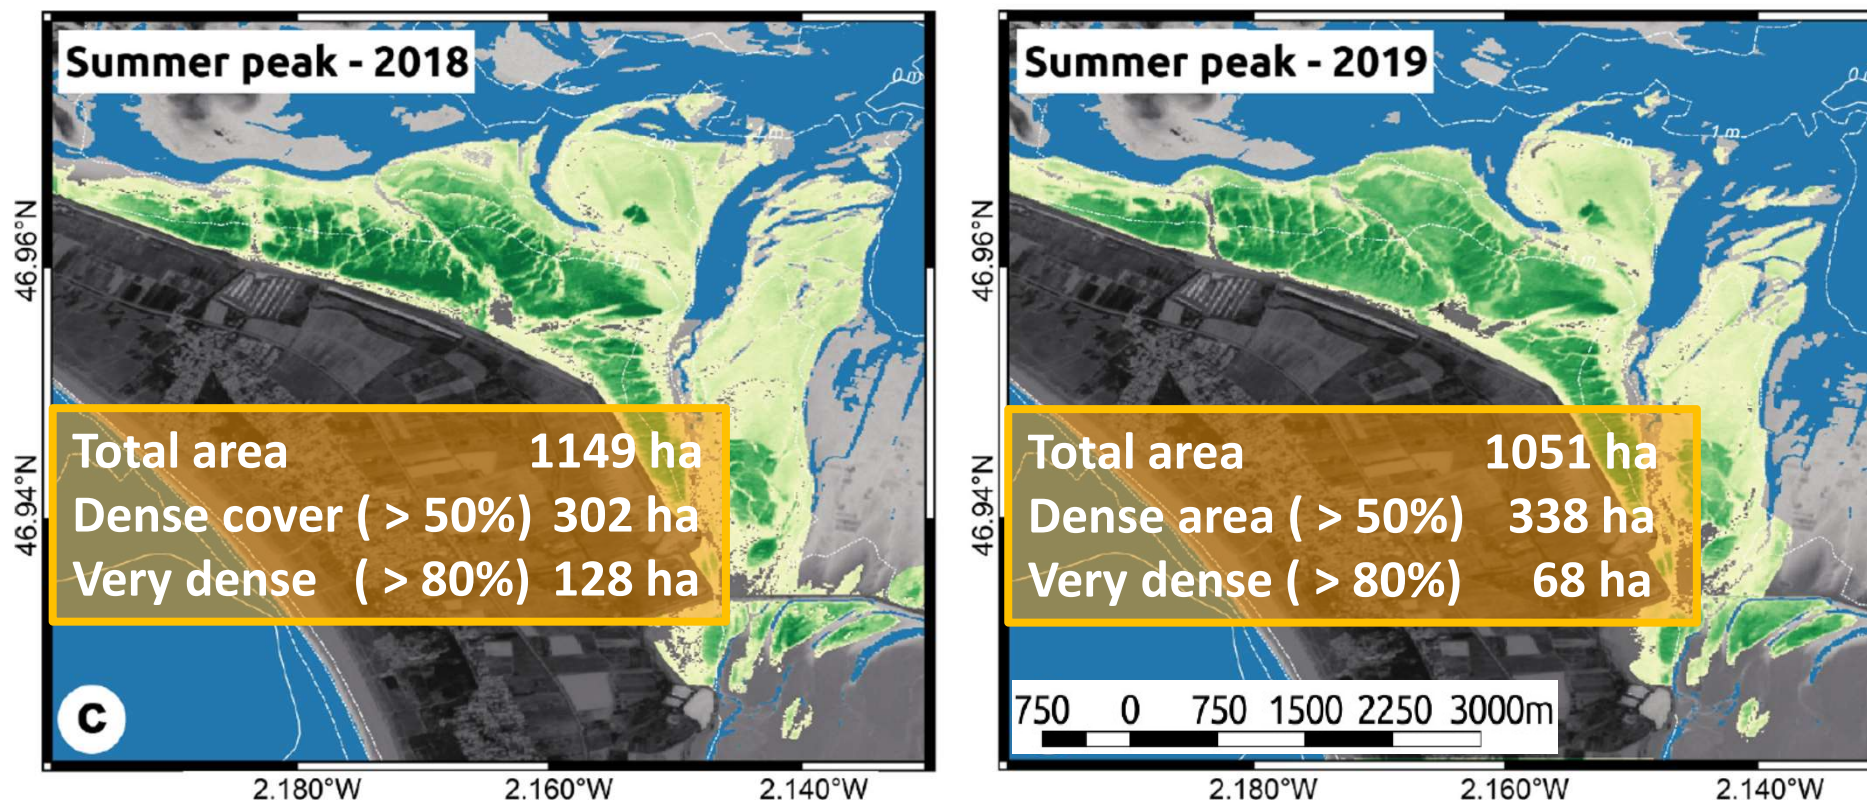

# Seagrass map (Bourgneuf Bay, France)

**Seagrass cover (%)**

- Flooded areas
- Intertidal areas without seagrass

# Spatial-rich information

**Seagrass cover (%)**

- Flooded areas
- Intertidal areas without seagrass

# Products & users

## ➤ Delivered seagrass products

- ❖ Google Earth (\*.kmz)
- ❖ GIS (\*.GeoTIFF)
- ❖ Shapefiles

*Liberté • Égalité • Fraternité*

**RÉPUBLIQUE FRANÇAISE**

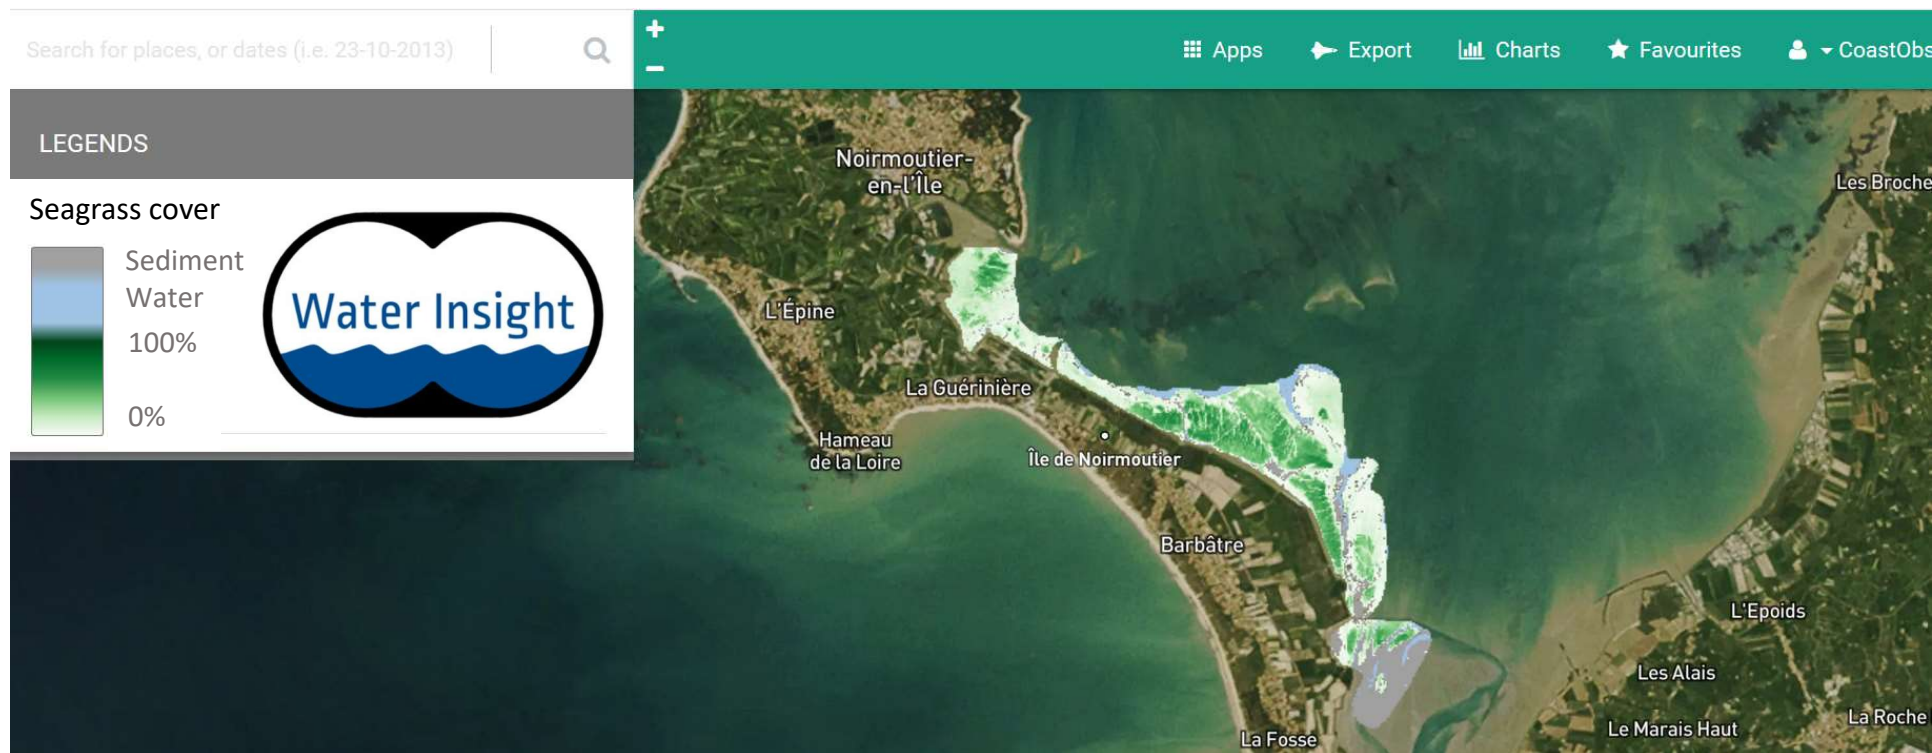

**Direction Départementale  
des Territoires et de la Mer**

## ➤ Positive feedbacks

## ➤ 1 user signed contract to buy the 2020 seagrass product

# Conclusion

- Sentinel-2 remote sensing of intertidal seagrass cover
  - ❖ Validated maps of *Zostera noltei* (RMSE 14%)
  - ❖ Spatial information representative of meadow status
  - ❖ From seasonal to long-term interannual monitoring
  - ❖ From local to pan-European scale
  
- Scientific publications
  - ❖ White Paper (2019)
  - ❖ Zoffoli et al. (2020)
  
- Product commercially available
  
- WFD indicator
  - ❖ Synoptic maps of percent cover
  - ❖ Extent metric of whole, dense, and very dense meadow
